

# RSInet Rail Management System

RSInet focuses on the need for accurate visibility and provides shippers with the proper tools to most efficiently manage shipments, railcar assets, and freight costs.

### Improve rail logistics

Shorten transit times and reduce costs through up-to-the-minute visibility and performance reporting on shipments, assets, and freight costs.

### Coordinate supply chain partners

Order management tools improve the flow of information between multiple partners within the supply chain – inbound and outbound.

### View complete car tracking data

Track and trace data are provided at the maximum granularity and accuracy. Rapid problem identification is enabled through automatic exception reporting, ETA calculation, and baseline comparisons.

### Proactively manage shipping problems

Customer service tools bring visibility and organization to facilitate timely problem resolution. Diversion requests are automated.

### Control rail rates

Bring discipline and control to your rate management process by tracking contracts, tariffs, and fuel charges. Receive notification of pending rate expirations. Tariff changes and fuel surcharges can be automatically updated.

### Easily measure performance

Reporting tools make it easy for you to view logistics performance. This is key to identifying opportunities for improvement and documenting results. Information such as idle days, demurrage, and inventory counts can be shared with supply chain partners.

### Utilize workflows that match your needs

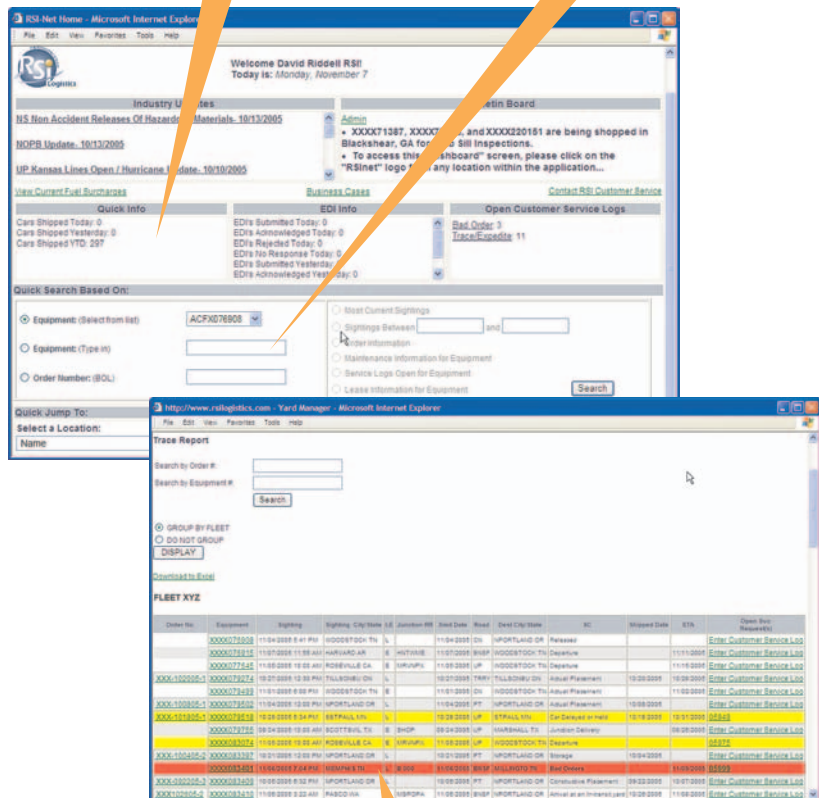

Best practice design features have been incorporated to compliment the true workflow and needs of rail logistics managers.

### Functionality to fit your needs

RSInet capabilities are easily configured to specific organizational and user needs. Supply chain partners can be provided with access for certain activities.

Dashboard display enables you to quickly view active shipments and cars.

Easily look up the status of railcars and orders.

Immediately identify and troubleshoot problem shipments

"...Westway Trading first utilized an internal legacy system then switched to a popular rail management application...in the end, (we) selected RSInet..."

Scott Rome, Westway Trading

RAIL MANAGEMENT SYSTEM

# Improve Rail Shipment Visibility and Control

## RSInet Rail Management System

<b>Order Management</b>	Improve visibility of inbound and outbound orders. Facilitate better communication between vendors, plant, and customers.
<b>EDI Billing</b>	Eliminate the cost of faxing BOLs and gain the peace of mind that your shipment is properly billed. Receive electronic receipt of the way-bill number directly from the railroad.
<b>Shipment Monitoring and Troubleshooting</b>	Quickly identify problem cars with exception reporting and problem resolution logs.
<b>Automated Diversion Requests</b>	Avoid having to deal with each rail carrier individually for diversions! One electronic form let's you divert cars on any railroad.
<b>Railcar Maintenance</b>	Take control of maintenance by tracking scheduled shop visits and shop costs.
<b>Rail Rate/Contract Management</b>	Gain complete visibility of your rail rates...including the current fuel surcharge! Rates are tied to shipments to create accurate freight accruals and reporting. Receive advanced warning of pending rate expirations.
<b>Rail Rate Estimates</b>	Eliminate the wait by using RSInet to receive rate estimates within hours instead of days.
<b>Track &amp; Trace</b>	Access the most up to date car location information with the click of a button. Problem cars are quickly and easily identified.
<b>Empty Dispositions</b>	Avoid empty diversions altogether by including empty disposition at the time of your loaded shipment!
<b>Railcar Leases</b>	Easily track and report railcar lease information.
<b>Inventory Management</b>	Have visibility and control of inbound and outbound material for multimodal and managed inventories.
<b>Yard Management</b>	Always know where your cars are located within your plant.
<b>Freight Accrual</b>	Alleviate the burden of managing invoices. Eliminate interest penalties and prevent overcharges.

RSInet represents the industries most complete, yet user-friendly rail management system. Backed by high quality services from RSI Logistics, RSInet is uniquely positioned to meet your organizations needs, now and in the future.
